# RESO

Insurance, software

## Integration with RESO insurance company

Our goal was to integrate car insurance services and the Universal Online Service for registration and sale of policies and the development of our own insurance business.

The integration list was:

- preparation and normalization of the data of super-market users for a single standard of an integrated system: car types, data on owners, drivers and the latest maintenance, etc.;
- ensuring information security of the interaction of systems;
- requests formation for insurance company services for preliminary calculation of the policy and its cost;
- saving received quotes until payment;
- integration with payment systems;
- tracking payment status and sending the policy to the client;
- saving transaction history.

The screenshot displays the user interface for the RESO insurance company. The top navigation bar includes 'СТРАХОВОЙ БИЗНЕС' and a user profile 'Джюльетта Егорова'. The main content area is divided into two tabs: 'Оформление' (Registration) and 'Мои расчеты' (My calculations). Under 'Оформление', there are input fields for 'Начало действия' (Start date) set to 25.10.2019, 'Длительность' (Duration) set to 1 год (1 year), and a dropdown for 'Действующий договор' (Active contract). Below these are three informational icons: 'Рекомендации по выбору даты' (Date selection recommendations), 'Доступно краткосрочное оформление' (Short-term registration available), and 'Акция "Зеленый коридор" от АльфаСтрахование' (Alpha Insurance 'Green Corridor' promotion). A 'Транспортное средство' (Vehicle) section is also visible. The bottom section, 'Предложения компаний' (Company offers), features a table with columns for 'СК' (Insurance Company), 'Сумма, ₽' (Sum, RUB), 'Доход, ₽' (Income, RUB), and 'Образец договора' (Contract sample). A row for 'PECO' shows a sum of 18481.58 and an income of 3603.91, with an 'ОФОРМИТЬ' (Register) button.

СК	Сумма, ₽	Доход, ₽	Образец договора
	18481.58	3603.91	<a href="#">ОФОРМИТЬ</a>

# NORD CLAN

# Customer area for Renaissance Insurance

Insurance, software

## Task

Insurance products should be sold without signing paper documents along with the standard scheme. Clients should be able to download the signed agreement in their accounts. Insurance company operators should be able to edit data in existing contracts and edit applications for new contracts.

## Results

A personal account of the client has been developed that implements the following schemes:

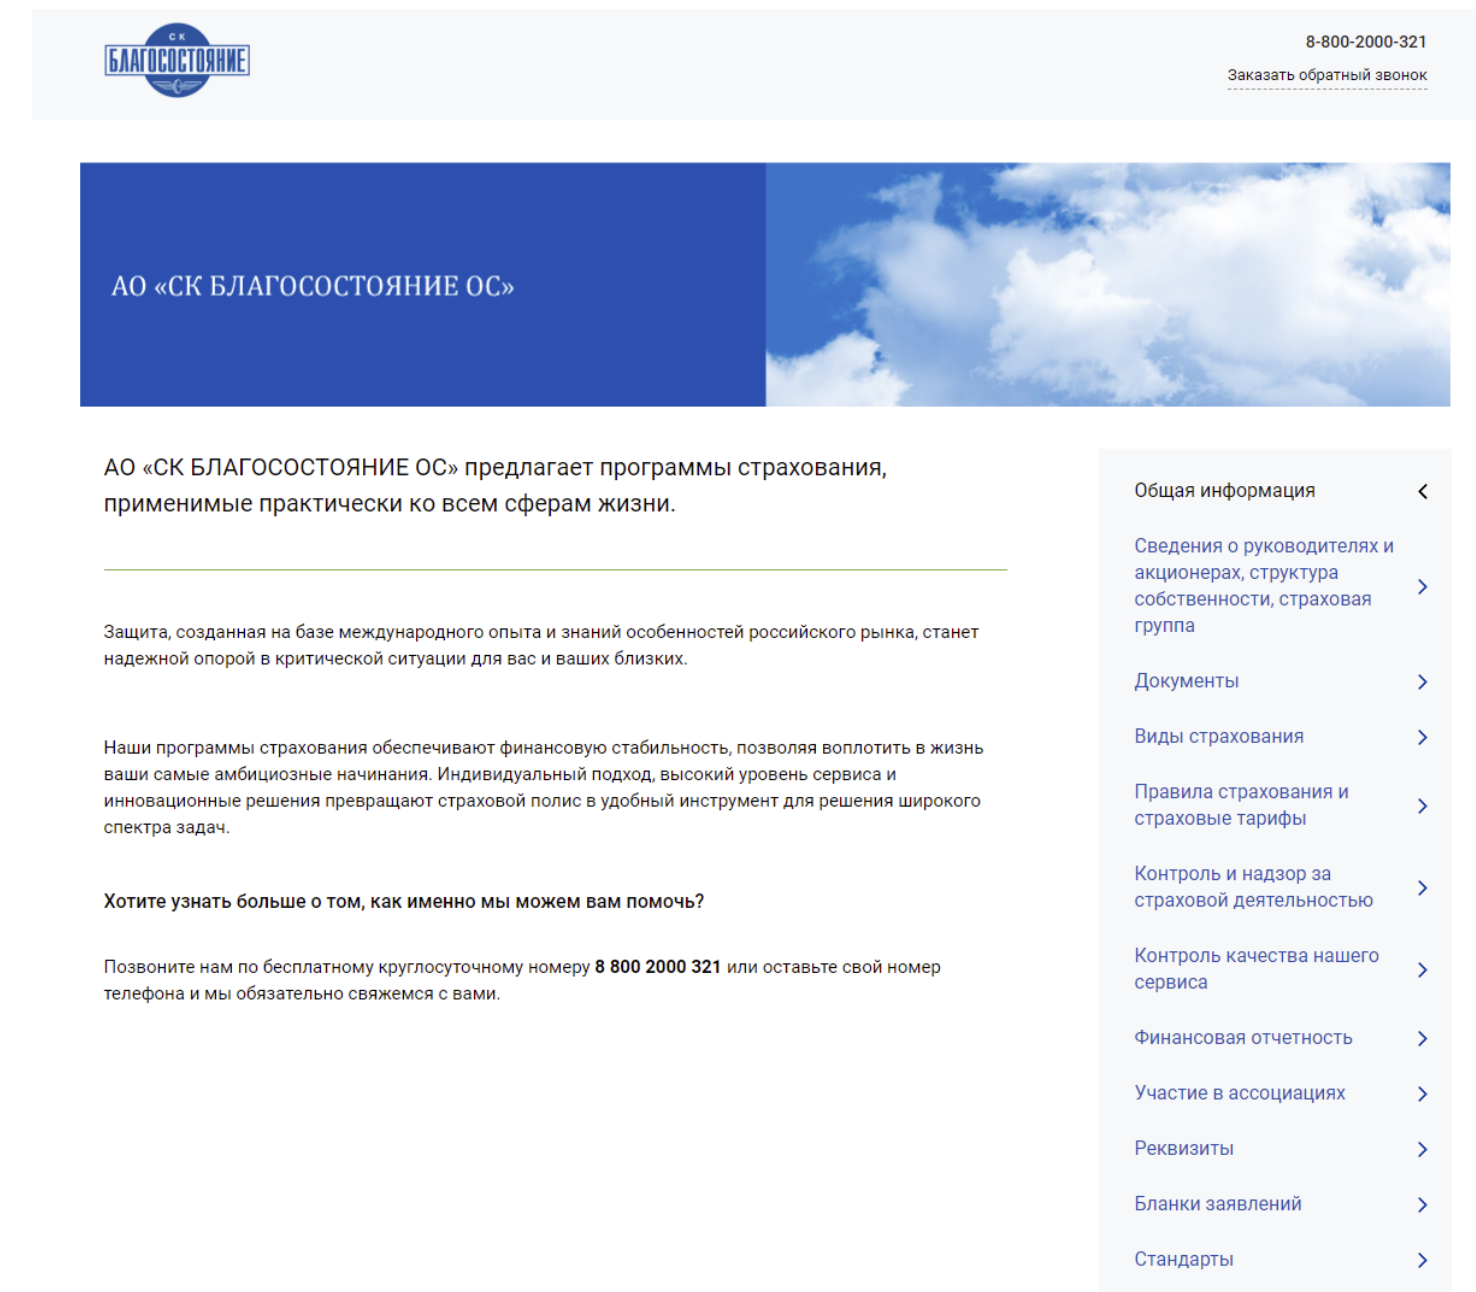

### 1. Boxed-product

- The partner sells the insurance product as a regular product without signing a contract with the client
- The client receives an agreement signed by the insurance company in his account. To do this, the client registers, enters the product code and fills in personal data

### 2. Direct clearance

- The client is registered on the portal
- The client draws up a new contract by choosing a program and entering personal data on specialized forms
- The client receives a document with the terms of the contract and can pay for it through supported systems
- The client can get the contract signed by the insurance company in your account

An insurance company client can download a signed digital signature contract by entering the self-service portal.

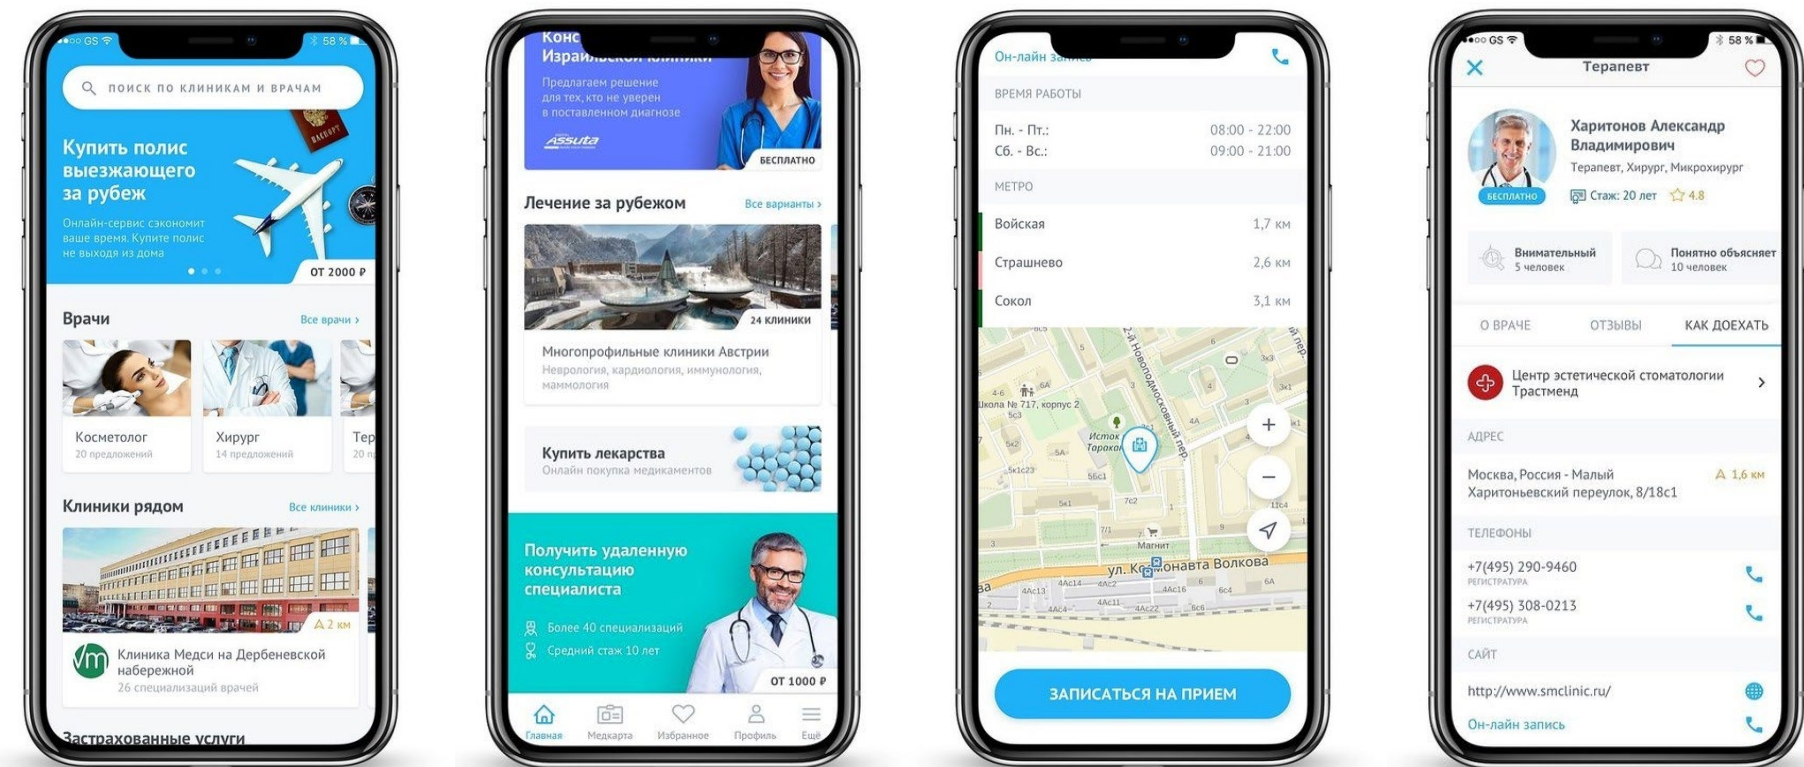

# All DMS

Insurance, mobile app

Service that allows you to use the Health Insurance Policy in a mobile application.

## Results

- Digitized policies for employees.
- Convenient navigation on the main screen and access to quick search.
- The opportunity to receive remote consultation and a selection of the best clinics abroad and within the country.
- Online appointment, schedule, map navigation.
- Public doctor profiles, reviews from real patients and all the information necessary for appointing.

# Connected Cars X

Insurance, mobile app

## Project description

Connected Cars X helps agents to set the smart coverage for aggressive drivers and help regular drivers to save on auto insurance. The solution consists of a Secure Telematics Hardware with OBD II interface, Secure Connected Cars X Platform, and a Mobile application.

The main features are to:

- Receive data from the specified devices of the car, save and transmit them to the server;
- Calculate the acceleration, harsh braking, average speed in general and when entering the turn;
- Derive the average driving performance by hours, days, months, with the ability to view details;
- Identify segments of the way where driving did not meet the specified safety criteria;
- Analyze the driving performance of the driver on the basis of which the discount will be calculated, and output the results in a specified format.

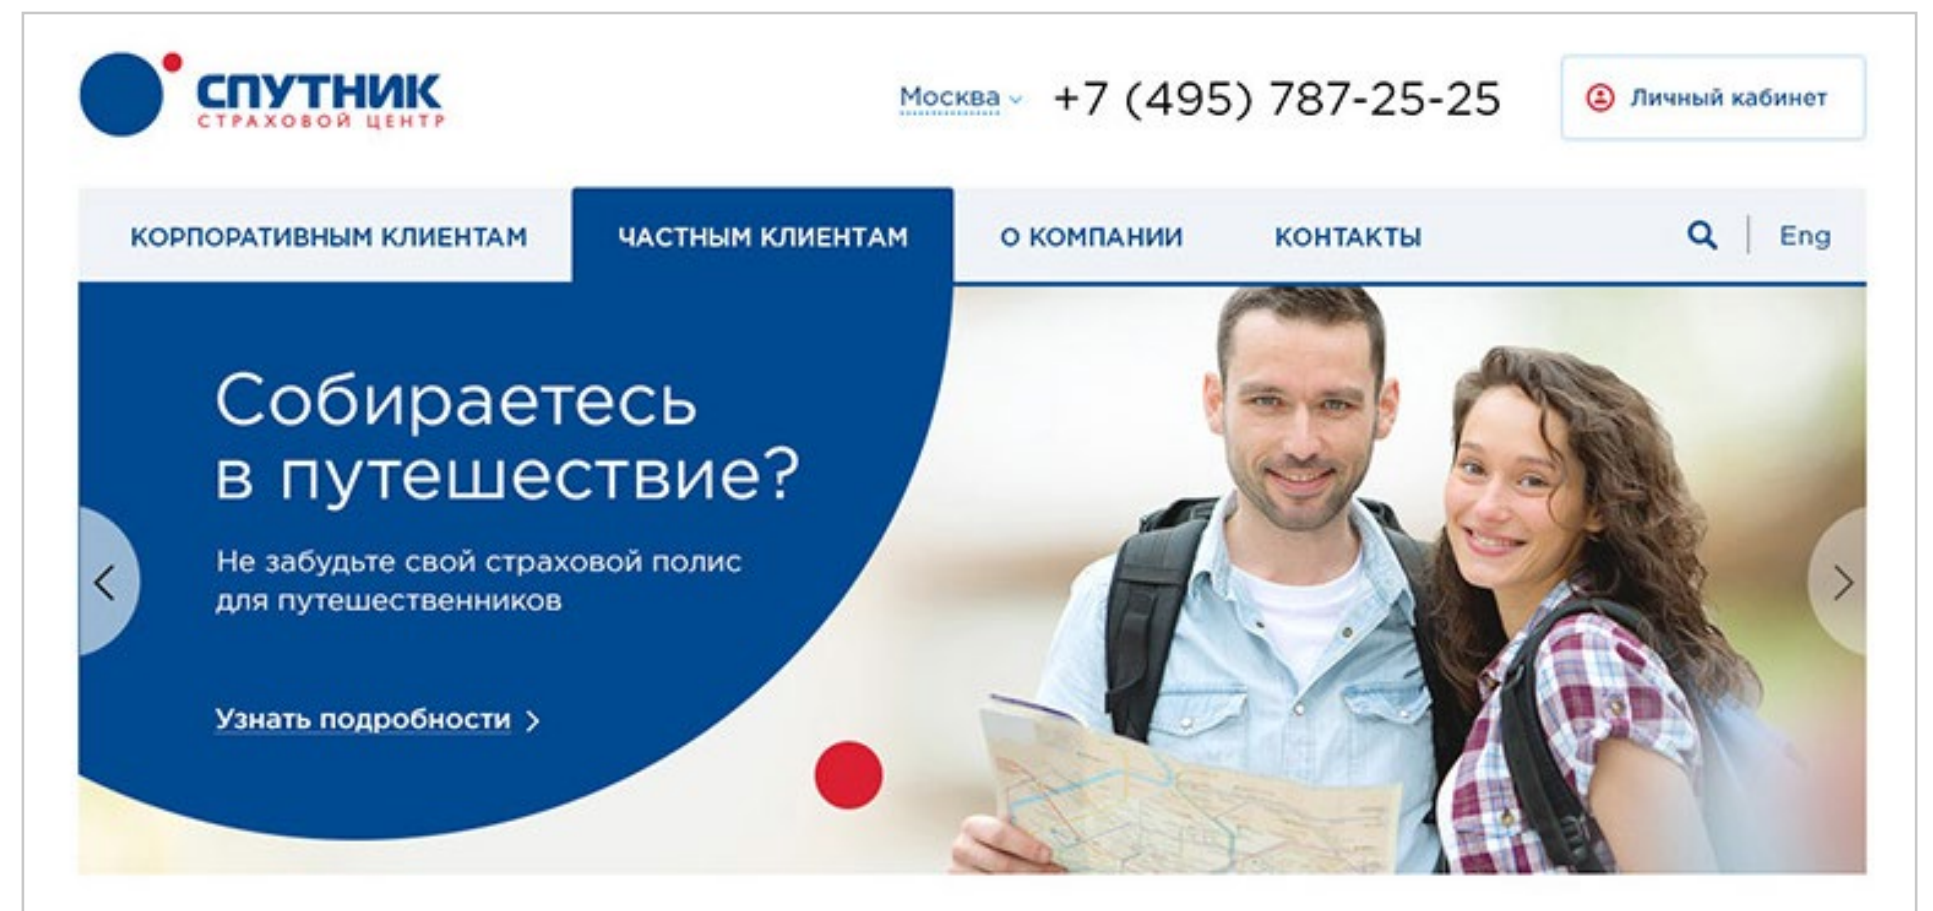

# The Sputnik Group

Insurance, webdesign

A website with an insurance calculator.

Since 2000, the SPUTNIK Insurance Center has been engaged in insurance of space technology and infrastructure. It provides property insurance for enterprises and organizations, as well as personal insurance for their employees. Since 2015, the insurance center began to provide services to individuals, and for these services we have developed a new website with insurance calculators.
