Travel

Adventurex

Travel, website

Website for the travel company Adventurex, which specializes in extreme travel.

Task
Create a website with exciting pictures, maps of the area, collections of photos or videos for each day of travel, as well as information about the complexity of the tour, guides, those who have already traveled or are going to participate. The process of choosing a tour should be clear and involving.

DORMIS

Travel, website

Find the best place to stay and immerse into the fantastic holiday with the help of Dormis web service.

Task
Our goal was to simplify preparations for traveling and help people to find the most suitable apartment with considering their wishes and priorities.

Solution
We created a website for booking and renting apart-ments online in Barcelona and other major cities of the Mediterranean which helps people to find the most suitable apartment according to their needs. Dormis.com is the place where the guest meets the host, the traveler finds shelter, and the owner shares a roof.

Snow Republic

Travel, mobile app

The Snow Republic is an Android and iOS native application, that involves maps of ski resorts in France and Switzerland and provides the information on the discount offers within a certain radius from the user location. It offers a possibility to purchase tickets to the various resorts and related items. You can buy the package with ski pass and equipment rental or receive a discount for the whole family. And here's how it works. To become a part of Snow Republic community and get access to all the application features you will have to download the app, buy and validate skipass.

Emphy

Travel, UI/UX

For an Estonian company Emphy we have created a high quality and great-looking design for iOS and Android platforms.

EMPHY is a decentralized ecosystem for real estate rental system, that allows the user to pay for the services with their inner cryptocurrency.

Our main goal was to create an app that will be somehow similar to Airbnb app, but with the ability to pay with Emphy cryptocurrency instead of some usual currencies.

During the work, we have analyzed the business domain and designed the user and screen flow scenarios.

In total, over 65 unique screens were created that included all the functionality and features required for a comfortable usage of the app by the user.

CHI Geolocation app

Travel, mobile app

Aim To help travelers all over the globe to travel with comfort, namely to find the shortest route to needed destination.

Solution CHI Geolocation is very useful for those people, who travel a lot – it helps travellers to find the best way in the new city. The App identifies user's current location and allows to choose the nearest Hotel, Hospital, Police Office, Subway or Bus Station, Café or Restaurant. Smartphone owner can select a category and then see all listed places on the Map. He/she can look through them, choose the most interesting sights and create a route from where the user stands to all preferred destinations. Navigation is very simple thanks to user friendly interface, so even a kid can manage it.
